CS146S Aut26 Alpha Release & Task Backlog

Due: Thursday, Nov. 5 @ 11:59pm

The Alpha Release & Task Backlog documents the initial working demo of your project, the structured list of tasks to complete (backlog), and a reflection on your AI/LLM tool integration experience. It should communicate progress and challenges clearly to both technical and non-technical stakeholders.

This document aims to offer guidance regarding what we are looking for in the Alpha Release & Task Backlog:

Early Working Demo

- Provide a description of the current alpha version.
- IMPORTANT: include screenshots or a short video demonstrating key features.
- Make note of which features are functional and which are placeholders or incomplete.

Documented Backlog

- Use a task management system such as **Jira, Linear, Trello,** or similar.
- For each task, provide:
    - **Title**
    - **Description**
    - **Status** (e.g., To Do, In Progress, Done)
    - **Priority** (e.g., High, Medium, Low)
    - **Assignee** (if working in a multi-person team)
- Include a link or screenshot of the backlog to show organization and planning.

Brief reflection on AI/LLM tool integration

We're interested in your experience using AI coding tools!

- Identify which AI/LLM tools you have used so far while building.
- Reflect on how these tools have influenced and accelerated your development process.
- Highlight any notable successes, challenges, or unexpected insights.

Notes

- Please use clear and concise language. Organize with headings or bullet points where appropriate.
- Use labeled diagrams or sketches if they help explain your idea.
- Aim for approximately 1-2 pages.
